
GGR424: Transportation Geography & Planning

Mondays 1:00pm to 3:00pm

SS 2111

Instructor

Jeff Allen | jeff.allen@utoronto.ca

Office Hours | Mondays 3:30pm-5:00pm or by appointment

Course Description

Introductory overview of major issues in interurban and intraurban transportation at the local, national and international scale. Topics include urban transportation, land use patterns and the environment, causes of and cures for congestion, public transit, infrastructure finance, and transport planning and policy setting.

Learning Outcomes

- Understand fundamental concepts and theories in urban transportation geography and planning.
- Identify and critically assess major social, political, economic, and environmental issues related to urban transportation.
- Analyze and visualize transportation-related data (including using GIS) to describe travel behaviour, transportation networks, land use, and accessibility.
- Apply the theoretical and practical knowledge you have acquired from the course to develop recommendations on improving urban transport systems.

Required Materials

There is no textbook for this course. All readings will be posted on Quercus.

Lateness & Submissions Policy

All assignments should be submitted via Quercus. Except in the case of personal or medical emergencies, work must be submitted on time. Extensions may be permitted on a case-by-case basis through consultation with the instructor. Late assignments will be docked 10% per day, including weekends. Re-weighting of assignments/grades is not permitted.

Projects & Evaluation

Travel Field Notes (10%)

Your personal impressions and experiences of a daily trip. This should be a regular/common trip such as your commute to school, to work, a trip to the grocery store, to the library, etc. First describe your trip including the mode(s) you took, the neighbourhoods you started and ended in, and the main routes you travelled on (e.g. Highway 401, Bloor-Danforth Subway Line, etc.) Then evaluate aspects of this experience of urban transportation that 1) worked for you or were even enjoyable and 2) that were challenging, difficult, or stressful. For instance, in addition to travel times and congestion, you may want to think of issues like comfort, accessibility, equity, health, sustainability, and safety.

600 to 900 words + at least 2 photos relating to key locations in your description.

Due January 24

Transit Station Critique (10%)

Describe and critique a public transit station that you use (or have used) frequently. First, describe the transit routes that connect to it and the common modes of transport that people use to access the station. Second, critique the station in its effectiveness in providing connections between routes and between modes, and in terms of its public space and amenities. What parts of the station work well? Which do not? (e.g. this can include discussion on signage and wayfinding, benches and seating, cleanliness, crowding, accessibility considerations, quality restaurants and washrooms if applicable, etc.). And third, briefly describe the land use around the station and argue whether its surrounding area is a good example of Transit Oriented Development.

600 to 900 words + at least 1 map of the station and surrounding area

Due February 7

Transportation Data Analysis (30%)

This assignment will consist of an analysis and interpretation of data from the Canadian census, the Transportation Tomorrow Survey (TTS), and various transportation datasets in GIS. Your

assignment will be to query and map these data and answer a set of analytical questions. The final report will be approximately 5-7 pages and will include charts, graphs, and maps along with textual interpretation.

Due February 28

Transportation Improvement Plan (Report 30%, Presentation 5%)

You will propose an intervention, solution, or improvement to a transportation problem you have identified in either your previous assignments or another project of your choosing. This plan or proposal can vary by mode, geography, and objectives. You will be evaluated on how evidence-based and well-reasoned it is as well as how effectively it is communicated. Big and small ideas welcomed, as well as imaginative ones that address particular problems that exist in the transportation landscape (e.g. improvement for a particular street or transit line) or broader issues such as transportation equity, sustainability, potential mode shift, and efficiency. You should demonstrate how your plan achieves some aspect of the public good. The plan should be 7-10 pages. Feel free to consider using a variety of communication methods for your plan, including design sketches, maps, street plans, renderings, and/or photographs.

The final two classes will be devoted to short (5 min) presentations followed by a brief Q&A period. The report will be due after the last class, so the presentation does not need to consist of a "complete" project.

In-Class Participation, Exercises, & Quizzes (15%)

The quality of your learning experience depends as much on your participation as well as what the instructor brings. There will be several interactive aspects to the class, including group discussions and design exercises. Attendance will be noted during class. Each of the first 11 weeks will involve at least one in-class activity, group discussion, or quiz. Each class will be worth 1.5% (you thus have the opportunity to earn a maximum of 16.5%).

Academic Integrity

Academic integrity is essential to the pursuit of learning and scholarship in a university, and to ensuring that a degree from the University of Toronto is a strong signal of each student's individual academic achievement. As a result, the University treats cases of cheating and plagiarism very seriously. The University of Toronto's Code of Behaviour on Academic Matters outlines the behaviours that constitute academic dishonesty and the processes for addressing academic offences.

For papers and assignments, this includes using someone else's ideas or words without appropriate acknowledgement, submitting your own work in more than one course without the

permission of the instructor in all relevant courses, making up sources or facts, or obtaining or providing unauthorized assistance on any assignment.

All suspected cases of academic dishonesty will be investigated following procedures outlined in the Code of Behaviour on Academic Matters. If you have questions or concerns about what constitutes appropriate academic behaviour or appropriate research and citation methods, please reach out to me. For further information on academic integrity, please see <http://academicintegrity.utoronto.ca/>.

Mental Health & Accessibility

The University provides academic accommodations for students with disabilities in accordance with the terms of the Ontario Human Rights Code. This occurs through a collaborative process that acknowledges a collective obligation to develop an accessible learning environment that both meets the needs of students and preserves the essential academic requirements of the University's courses and programs. Please see [Accessibility Services](#) for more information.

As a student at U of T, you may experience circumstances and challenges that can affect your academic performance and/or reduce your ability to participate fully in daily activities. An important part of the University experience is learning how and when to ask for help. There is no wrong time to reach out, which is why there are resources available for every situation and every level of stress. Here are some available resources:

- [Student Life Safety & Support](#)
- [Student Life Health & Wellness](#)
- [Emergency support if you're feeling distressed](#)
- [Student Mental Health Resources](#)
- [Additional mental health resources can also be found on the Geography website](#)

Writing

Clear writing and communicating is essential. You will be expected to write clearly and effectively on assignments. The University provides some resources through the writing centres. Brief advice on specific elements of writing for university courses can also be found here: <https://writing.utoronto.ca/writing-centres/arts-and-science/>

Course Schedule

Week 1 | Introduction to Transportation Geography & Planning

January 10

Review of syllabus. Overview of key concepts and methods in transportation planning and geography.

Week 2 | Cars, Roads, & Highways

January 17

Rise of cars as the predominant mode of travel in North American cities. How the infrastructure of automobiles has transformed transportation and land-use and has affected daily life.

- **Reading:** Jacobs, J. (1961). *The Death and Life of Great American Cities*. Vintage. Chapter 18: Erosion of cities or attrition of automobiles (will be posted online)
- **Reading:** Zipper, D. (2021). *The Unstoppable Appeal of Highway Expansion*. Bloomberg CityLab. [URL](#)
- **Video:** Not Just Bikes (2021) *Stroads*. [URL](#)
- **Video:** TVO (2018) *Highways and our Transportation Future* [URL](#)
- (optional) **Reading:** Robinson, R. (2011) *The Spadina Expressway Controversy in Toronto, Ontario*. *Canadian Historical Review* [URL](#)

Week 3 | Cycling & Walking

January 24

Walking and cycling in the city. Health benefits of active travel. Safety issues. Streets as public space. Designing complete streets.

- **Reading:** Hess, P. (2009) *Avenues or Arterials: The struggle to change street building practices in Toronto, Canada*. *Journal of Urban Design*, 14(1), 1-28. (will be posted online)
- **Video:** Cycle Toronto (2021) *Scarborough Needs a Cycling Network*. [URL](#)
- **Interactive:** Explore Streetmix, an interactive tool for designing cross-sections of streets. [URL](#)
- **Interactive** Explore the City of Toronto's Vision Zero Plan & Dashboard. [URL](#)
- **Interactive** Explore The Centre for Active Transportation's (TCAT) website. [URL](#)

Week 4 | Public Transit

January 31

Theory and practice of public transportation planning, design, and operations. Overview of Transit Oriented Development (TOD)

- **Reading:** Walker, J. (2011) Human Transit. Chapters 1 and 2. pp.1-37 (will be posted online)
- **Reading:** Review the TTC's 5-Year Service Plan & 10-Year Outlook [PDF](#), [URL](#)
- **Video:** Transit Analytics Lab (2020) History of Public Transit in Toronto [URL](#)
- **Video:** RMTransit (2021) The Key to Building Transit-Oriented Development [URL](#)
- *(optional)* **Reading:** Ocejó, R. E., & Tonnelat, S. (2014). Subway diaries: How people experience and practice riding the train. *Ethnography*, 15(4), 493–515. [URL](#)
- *(optional)* **Video:** Vox (2020) Why American public transit is so bad [URL](#)

Week 5 | Transportation Networks & Land Use

February 7

The spatial organization of transportation networks. Transportation and land-use. Measuring and evaluating accessibility.

- **Video Lecture:** Handy, S. (2019) Accessibility versus Mobility. [URL](#)
- **Map:** Explore Geoapify's Commute Time Map [URL](#)
- **Map:** Allen, J. (2018) Access to Employment in Canadian Cities. [URL](#)

Week 6 | Maps, Data, & GIS

February 14

Common forms of data used for analyzing transportation systems. GIS analysis for transportation planning and research. Transportation data visualization and cartography.

- **Reading:** Guo, Z. (2011). Mind the map! The impact of transit maps on path choice in public transit. *Transportation Research Part A: Policy and Practice*, 45(7), 625-639. (will be posted online)
- **Maps:** Explore Maps on the Transit Maps Blog [URL](#)
- **Interactive Story:** Barry, M. & Card, B. (2014) Visualizing MBTA Data. [URL](#)

- **Interactive Story:** The Pudding (2017) How far is too far? An analysis of driving times to abortion clinics in the US. [URL](#)
- **GIS:** Download and familiarize yourself with QGIS (if you do not have it already). [URL](#)

Week 7 | Reading Week

February 21

Week 8 | Sustainability

February 28

Urban transportation and climate change. Potential of electric vehicles. Incentives for shifting to more sustainable modes.

- **Reading:** Banister, David. (2011). Cities, mobility and climate change. *Journal of Transport Geography*, 19(6), 1538–1546. [URL](#)
- **Interactive:** Our World in Data (2022) Transport [URL](#)

Week 9 | Health & Equity

March 7

How the costs and benefits of transportation are (in)equitably distributed. Health impacts of transportation (e.g. pollution, noise)

- **Reading:** Lucas, K. (2012). Transport and social exclusion: Where are we now?. *Transport policy*, 20, 105–113. [URL](#)
- **Reading:** Litman, T. (2020), *Evaluating Transportation Equity Guidance For Incorporating Distributional Impacts in Transportation Planning*, Victoria Transport Policy Institute. [URL](#)
- **Map:** Farber, S. & Allen, J. (2018) *Transit in Toronto: Connections between socioeconomic status and transit availability*. [URL](#)
- **Map:** TransitCenter (2021) *TransitCenter Equity Dashboard*. [URL](#)

Week 10 | Economics & Politics

March 14

Financing transportation infrastructure. Transportation evidence and decision-making. Cost-benefit analyses.

- **Reading:** Pagliaro, J. & Spurr, B. (2017) How politics, not evidence, drives transit planning in Toronto. [URL](#)
- **Reading:** Metrolinx (2020) Ontario Line Preliminary Design Business Case Summary. [URL](#)

Week 11 | The Future of Transportation

March 21

Potential and concerns with new mobility technologies, such as shared mobility (e.g. ride hailing, bike-share, etc.), on-demand transit, and autonomous vehicles.

- **Reading:** Millard-Ball, A. (2018). Pedestrians, Autonomous Vehicles, and Cities. *Journal of Planning Education and Research*, 38(1), 6-12. (will be posted online)
- **Reading:** Zhang, Y., Farber, S., & Young, M. (2021). Eliminating barriers to nighttime activity participation: the case of on-demand transit in Belleville, Canada. *Transportation*, 1-24. (will be posted online)

Week 12 | Presentations

March 28

Week 13 | Presentations

April 4
